

BRIDGE COUNTER | SETUP INSTRUCTIONS

1) Build counter from the bottom up starting with the outer sections. Screw feet into square poles through bottom shelf. **See Pole Orientation Diagram on Page 3 for pole alignment.**

2) Once all four poles and feet are attached to bottom shelf place counter section upright.

3) Secure top shelf to poles with bolts or optional caps. If locking doors are purchased, insert them as you attach top shelf by sliding door pegs into holes in shelves.

4) Once first counter section is assembled, repeat with second counter section so that they mirror each other.

5) Place middle bridge sections on gussets and attach with bolts and weld nuts.

6) Once all shelves are secured, insert panels by applying tension.

Finished!
